

2026-08-24 – Governance weekly

- Date: 2026-08-24
- Participants: raito, horrors, rootile, piegames
- Topic: Governance weekly

What we've been up to

- raito: on vacation; mostly focuses on keeping horrors sane
- piegames: no lix for now; things have been on fire and they still are (unrelated to lix, "for a change ig")
- rootile: not too much neither, code reviews, triage issues which are coming in; will do the transcription this week (meeting notes)
- horrors: we tried to translate more libstore stuff, specifically the narinfo cache so we can maybe pull more cache infra; the CLs out there are mostly stalled on reviews

What are current urgencies?

- security issues [rootile]
- announcements and finishing offboarding [raito]
- ensure that people can test the lix-xp1 protocol [raito]
- matrix: [delegated to K900]
 - dendrite-to-synapse

Updating the governance structure on community team and governance advisors [piegames]

- update memberships of the community team
- keep the community team formalism as-is as we have been vaguely doing it
- update memberships of the governance advisor team

Marking lunaphied as inactive [raito]

- suggestion to declare lunaphied inactive from now on
- if no life sign in 3 months, move to removal by vote

Update security disclosure handling [piegames]

- piegames is offering help in terms of first-level triage of LLM security issues
 - Put all of core team plus piegames on security@lix.systems [raito]
 - But raito and piegames are owning that things get processed
 - Manually forward & pretriage all incoming reports into Zulip #security channel for discussion
-

Revision #1
